WHY CHOOSE A LOG BOILER?

NEW PRODUCT: EASYPELL LOG BOILER

The Easypell log boiler is the ideal choice for homeowners seeking self-sufficiency and cost-effective heating solutions.

Utilising your own firewood, these log boilers boast some of the lowest running costs available, making them an environmentally friendly option that cuts down on energy bills.

Designed for maximum convenience, the Easypell log boiler features automated functionality that takes the hassle out of lighting your fire. Once loaded with firewood, it ignites at pre-set times, allowing you to enjoy a warm and cozy home without the constant need to monitor the burn. This innovative technology not only ensures efficient heating but also saves time.

With the Easypell log boiler, you can embrace sustainable living without compromising on comfort.

AUTOMATIC IGNITION

Automatic boiler ignition makes life easier. You simply load the logs and let the boiler do its thing. Delayed? If you'll be away for longer than expected, or when you return from holiday, you decide when to switch on your boiler.

OPTIMISED COMBUSTION

Combustion by inverted flame and gasification ensures consistently high efficiency. The supply of primary and secondary air is automatically regulated by two servo motors, and the oxygen level is optimised by a lambda probe. Fume extraction is ensured by a variable-speed fan.

CLEAN BOILER

The EASYPELL log boiler features a large ash drawer for easy, clean ash removal. A soot- removal handle makes it easy to clean the heat exchangers for constant combustion efficiency.

COMFORT WITHOUT COMPROMISE

Automatic ignition, easy loading, long autonomy, and simple cleaning, make it easy to use.

Real-time control, and automatic air supply adjustment ensure high-performance combustion.

SAVINGS ON PURCHASE AND USE

By focusing on the essentials, the EASYPELL log-fired boiler is accessible to all.

If you have access to your own firewood, there's no cheaper source of central heating available.

A PRESERVED CLIMATE

Wood is a local, renewable energy source, and by replacing diesel or gas, it can help combat climate change.

The CO_2 emitted during combustion is offset by the CO_2 absorbed by the tree during its growth.

ABOUT US

Since 2014, the team at Apricus Eco have been designing and supplying eco-friendly hot water and central heating systems for homes and commercial buildings across New Zealand.

We offer expert advice, high performance systems, technical training and long term, on-shore product support.

Our eco-friendly hot water and central heating products include hot water heat pumps, pellet boilers, and solar hot water systems.

Using the latest technology and designs we can reduce your bills and environmental impact.

OUR SERVICES & PRODUCTS

COMMERCIAL & STATE SECTOR

- Building heat load assessment and calculation
- Domestic hot water demand analysis
- Heat source sizing, design and specification
- Hydraulic, electrical and seismic system designs

HOMES

- Expert advice to choose hot water or central heating system for any home
- Central heating and domestic hot water system design and specification
- Specialist training and support for installers
- Responsive and knowledgeable customer support
- Long term warranty and all spare parts available on-shore in New Zealand
